

# MONTHLY WEATHER MAP

## METEOROLOGICAL SERVICE

### DOMINION OF CANADA

MAY 1933

#### TEMPERATURE

The month was warm in Saskatchewan and southern Manitoba, the excess over normal temperature ranging from four to seven degrees over a large part of the grain region. In Alberta, however, some districts, particularly in the extreme south and southwest reported mean temperatures a degree or more below normal, while northern and eastern districts reported a moderate excess.

In Ontario (except for the slopes draining towards James Bay and part of the Ottawa valley where the month was normal or cooler) there was a general excess of two or three degrees.

In northern Quebec from southern Ungava to the Hudson Straits there was a deficiency of two to five degrees. In the Gulf region the deficiency was small, while in southwestern Quebec there was a small excess over normal temperature.

In northern New Brunswick and locally in Nova Scotia there was a deficiency of about one degree. In southern New Brunswick and over most of Nova Scotia and Prince Edward Island there was a small excess which reached two or three degrees locally.

In British Columbia temperatures were generally below normal except in the extreme north. On Vancouver Island and in the lower Fraser valley the deficiency amounted to two or three degrees.

From the lower reaches of the Peace and Athabasca rivers down the Mackenzie as far as the Great Bear Lake there was an excess over normal temperature which reached five degrees in the valley of the Slave. The western coast of Hudson Bay, however, was cooler than usual by one to three degrees.

#### PRECIPITATION

In British Columbia precipitation was for the most part slightly below normal. In the lower Fraser valley, however, there was an excess of twenty to fifty per cent and a deficiency of thirty-five per cent or more in parts of the East Kootenay.

In Manitoba in grain districts 3, 4, 5, and 6 there was an excess of twenty per cent over normal, while in the remainder of the province the excess averaged one hundred per cent. In Saskatchewan the stations which have so far reported indicate an excess of twenty per cent in grain districts 5, 6 and 7; in grain districts 1, 2, 3 and 4 sixty-five per cent; in districts 8 and 9 thirty per cent. In Alberta there was a deficiency of sixty per cent in grain districts 2 and 4, while in grain district 5 the amount was about normal. In grain districts 1, 3 and 6 the excess was fifteen per cent and in districts 7, 8, 10, 11, 13 and 14 ten per cent. In district 9 the excess was one hundred per cent. In district 16 the deficiency averaged about five per cent but in the immediate vicinity of Lesser Slave Lake the deficiency was still larger.

In Ontario there was a considerable excess in the Kenora district and locally on the southeast shore of Lake Huron. There was a moderate excess in Algoma, Sudbury and southern Temiskaming. Most of the counties along Lakes Erie and Ontario had only one-half to one-third the normal amount.

In Quebec there was a large excess in the extreme southwest and a moderate excess in the region of the Gulf of St. Lawrence.

In the Atlantic provinces precipitation was for the most part scanty. Deficiencies in New Brunswick and Prince Edward Island varied from three to fifty per cent. In Nova Scotia there was an excess of five to fifteen per cent along the southern shore of the Bay of Fundy. Elsewhere in Nova Scotia there was a deficiency of fifteen to forty-five per cent. Forest fires were prevalent in New Brunswick during the third week of the month and official warnings were published regarding the seriousness of the forest fire situation.

A. J. CONNOR

# SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month.
